FOR THE FCI® FS10 FLOW SWITCH

FS10 Standalone Monitor

UL • ETL • CE • FCC CERTIFIED SUPPLY

A compact USB monitor & RS-232 passthrough device that reads out FS10 flow switch condition — graphically and as text — with or without a PC connected.

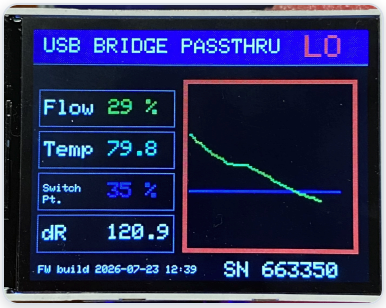

Live flow switch status, at a glance

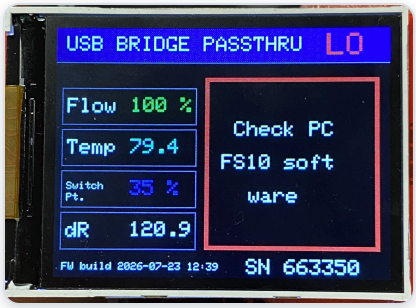

A bright 2.4″ color display shows Flow%, Temperature, Switch Point, and dR as live numeric readouts plus a rolling trend graph — so techs can see switch behavior developing in real time, not just a pass/fail snapshot.

- **USB Bridge Passthru** — connects straight through to PC-based FS10 configuration & monitoring software.
- **On-screen diagnostics** — flags cable and communication faults directly on the display.
- **Plug-and-play USB** — no drivers to install, simple and field-proven design.
- **Stand-Alone Monitor mode** — keeps reading and displaying flow status with no PC attached.
- **Drop-in replacement** — works with existing FS10 flow switch wiring in the field.
- **Field-tested** — units already in daily use in customer support & field service roles.

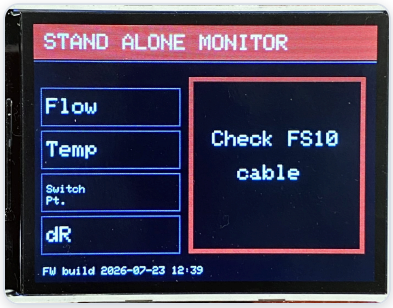

THE DISPLAY IN ACTION

Live monitoring — low-flow condition

On-screen fault diagnostics

Stand-alone monitor mode

REPLACES THE LEGACY FCI FS10-PSI

The original FCI FS10 Power Supply Interface accessory carries no UL or other safety-agency certification. The FS10 Standalone Monitor ships with a **UL/ETL/CE/FCC-certified power adapter**, making it suitable for use in UL-certified labs and facilities where the legacy supply is not.

DISPLAY	INTERFACE	MODES	POWER ADAPTER	COMPATIBILITY
2.4″ color TFT, 240×320	Plug-and-play USB + RS-232 passthrough	USB Bridge Passthru & Stand-Alone Monitor	UL / ETL / CE / FCC certified	FCI FS10 flow switch
